

## Original Released Build: 15.3

- [18603] Added support for running WebIQ on a remote server other than the ImageQuest host
- [18132] Enhanced GLCode document page to include workflow history
- [18317] IQAPI config file now includes options for enabling SSL
- [18278] Updated PDF Toolkit to fix issues with fillable PDF files getting corrupted in certain instances
- [18687] Fixed excessive Logiforms logging issue when Logiforms was not configured
- [18627] Removed email address field mask in IQadministrator to support all valid characters
- [16506] Added the ability to disable data in transit encryption for environments that have non-domain computers attaching to IQ
- [18129] Added the ability to view and add notes in WebIQ
- [16850] Added a feature to the Work Queue to allow users to quick approve multiple records at once
- [11378] Added the ability to sort and filter the document history grid Connector

---

## Original Released Build: 15.2.0.12

- [C49162] Switch reading of GhostScript error/output to async due to deadlock processing some PDFs in the LiquidOffice Connector
- [C49172] Trim the error and output streams for GhostScript as it includes a line break by default in the LiquidOffice Connector
- [C49319] Built LO Connector as 32-bit so it can read the IQ registry entries correctly
- [C49523] Quick Approve added to Workflow
- [C49544] Upgraded SetDocumentGroup workflow activity to use the name instead of the ID
- [C49561] View History Control: added filtering/sorting to grid
- [C49578] Fixed issue where Logiforms stops polling after encountering various networking issues
- [C50048] Add support for HTTPS into default API web.config
- [C50151] Added configuration toggle to enable or disable data in transit encryption for non-domain computers
- [C50289] Added ability to view/add notes in WebIQ.

---

## Original Released Build: 15.1.0.11

- Added support for Windows Server 2019, SQL Server 2017 and Office 2019
- Fixed issue where Apply to all new documents does not work when switching Document Type.
- Added ability to map message fields to ImageQuest attributes when using the Attachments Only option in Outlook.
- Addressed issue with excessive Logiforms polling when the API key is invalid.
- Fixed issue where Temp folders do not get deleted by ImageQuest when the client is closed.

- Fixed an issue with IQ OCR Service stopping when it encounters certain invalid PDF file
- Added SSL support for SMTP Settings [PBI 14879] – ImageQuest now uses secured transport for server-to-client file transfer.

---

## Original Released Build: 15.0.10.1

- ImageQuest now uses secured transport for server-to-client file transfer.
- The custom workflow designer is no longer hidden behind an Informa-only password. The Administrator user can now access the workflow designer.
- When a custom workflow encounters an error and enters a Faulted state, the context and details of the error are shown in the workflow history.
- Addressed an issue in the GL Coding Workflow window in IQdesktop where, if the user changed the document amount attribute value against which GL code totals were being validated, the validation would run against the old attribute value unless the user had first saved changes. Now, if a user changes an attribute value and attempts to complete a workflow, the new value will be used when running validation.
- Added a “Poll Now” button for the Logiforms connector. For testing purposes, this forces ImageQuest to poll for new Logiform records within the next 30 seconds.
- Attribute Lookup is now available in IQdesktop for Request Approval work items from custom workflows.
- The size and position of the Attribute Lookup results window is now saved for the next time the window is opened, regardless of whether IQdesktop has been restarted or of the screen from which the window is opened.
- Fixed an issue in the indexer where “Apply to All new Documents” could apply an attribute value to existing documents.
- Added a “Poll Now” button for the DocuSign connector. For testing purposes, this forces ImageQuest to poll for newly signed DocuSign envelopes within the next 30 seconds.
- Fixed an issue where the preview pane sometimes showed an image even when the document grid was empty.
- WebIQ has been upgraded to offer a more modern design and better mobile experience.
- Verbiage has been added to the OXPd configuration screen in IQadministrator to indicate that this feature is being deprecated.
- Fixed issue where IQ Application Service could not be run as a domain user (15.0.2.1)
- Fixed issue where GL Code Segments aren't available in WebIQ (15.0.3.1)
- Fixed issue where pages show up blank in the indexer (15.0.5.1)
- Updated Nuance library to fix OCR issue where strikethrough lines would be added to the document after processing (15.0.6.1)
- Fixed issue where the zoom setting was not persisted in the Indexer (15.0.6.2)
- Fixed issue where users could not print a range of pages from the Indexing queue if the document was a PDF (15.0.6.2)
- Improved loading of large indexing queues (15.0.7.1)

- Updated IQ installer to fix installing IQ with TLS 1.0 disabled (15.0.8.1)
- Fixed issue where the OCR service would crash on certain PDF files (15.0.9.1)
- Disabled file storage security to allow IQ clients to work without being joined to a Windows domain (15.0.10.1).

---

## Original Released Build: 15.0.0.15

- [PBI 14879] – ImageQuest now uses secured transport for server-to-client file transfer.
- [PBI 14956] – The custom workflow designer is no longer hidden behind an Informa-only password. The Administrator user can now access the workflow designer.
- [PBI 14954] – When a custom workflow encounters an error and enters a Faulted state, the context and details of the error are shown in the workflow history.
- [BUG 14864] – Addressed an issue in the GL Coding Workflow window in IQdesktop where, if the user changed the document amount attribute value against which GL code totals were being validated, the validation would run against the old attribute value unless the user had first saved changes. Now, if a user changes an attribute value and attempts to complete a workflow, the new value will be used when running validation.
- [PBI 14955] – Added a “Poll Now” button for the Logiforms connector. For testing purposes, this forces ImageQuest to poll for new Logiform records within the next 30 seconds.
- [PBI 14865] – Attribute Lookup is now available in IQdesktop for Request Approval work items from custom workflows.
- [PBI 14867] – The size and position of the Attribute Lookup results window is now saved for the next time the window is opened, regardless of whether IQdesktop has been restarted or of the screen from which the window is opened.
- [BUG 15020] – Fixed an issue in the indexer where “Apply to All new Documents” could apply an attribute value to existing documents.
- [PBI 15019] – Added a “Poll Now” button for the DocuSign connector. For testing purposes, this forces ImageQuest to poll for newly signed DocuSign envelopes within the next 30 seconds.
- [Bug 14984] – Fixed an issue where the preview pane sometimes showed an image even when the document grid was empty.
- [PBI 14960] – WebIQ has been upgraded to offer a more modern design and better mobile experience.
- [PBI 10107] – Verbiage has been added to the OXPd configuration screen in IQadministrator to indicate that this feature is being deprecated.

---

## Original Released Build: 14.6.0.25

- Work items may now be reassigned through WebIQ.
- The DocuSign Connector in IQ can now be used to sign existing IQ documents of any file type, provided they are supported by DocuSign. Signed copies are saved as PDF revisions.
- A vwDocumentHistory view has been added to the database for reporting purposes.

- IQforms is now licensed through IQadministrator. Separate license modules exist for template, barcode, check, and keyword forms features.
- ImageQuest now integrates with Logiforms, a provider of online form design and data collection. Forms completed through Logiforms can be configured to be retrieved and saved in ImageQuest.
- An issue was addressed where the IQprinter window did not show the IQprinter verbiage.
- An issue was addressed where a SQL error could cause ADSync to stop working.

---

### Original Released Build: 14.6.0.23

- [PBI 14039] – Work items may now be reassigned through WebIQ
- [PBI 14452] – The DocuSign Connector in IQ can now be used to sign existing IQ documents of any file type, provided they are supported by DocuSign. Signed copies are saved as PDF revisions.
- [PBI 13898] – A vwDocumentHistory view has been added to the database for reporting purposes.
- [PBI 11482] – IQforms is now licensed through IQadministrator. Separate license modules exist for template, barcode, check, and keyword forms features.
- [PBI 14569] – ImageQuest now integrates with Logiforms, a provider of online form design and data collection. Forms completed through Logiforms can be configured to be retrieved and saved in ImageQuest.
- [PBI 14567] – An issue was addressed where the IQprinter window did not show the IQprinter verbiage.
- [PBI 14568] – An issue was addressed where a SQL error could cause ADSync to stop working.

---

### Original Released Build: 14.5.0.33

- IQprinter has been upgraded to use NovaPDF v8. This fixes a few minor issues.  
Note: the IQprinter installation is now decoupled from the main client installation. This will allow for future IQdesktop upgrades without needing to upgrade IQprinter as well.
- The OCR engine used by ImageQuest has been upgraded to Nuance Omnipage v20.
- Improved display of masked data in WebIQ workflow screens (for example, currency values now show only 2 decimal places).
- Addressed a rounding issue which caused GL Code validation to be incorrect under certain conditions.
- Dependency on Adobe Reader when performing keyword searches had been removed. The default system PDF viewer is used, but keyword terms are not highlighted.
- Addressed several other minor system issues.

---

### Original Released Build: 14.4.0.13

- - Users may now print individual pages or entire batches from the Indexer. If annotations have been made to a page, users may choose whether to print the individual page with or without the annotations.
- GL Codes may now be edited via WebIQ for AP Workflow and custom workflows with GL Code activities.
- Approval activities in custom workflows may now be configured to "time out" after a specified number of days. If a work item times out, the workflow can be defined to send the document down a separate path, such as an escalation to another user or role.
- Approval activities in custom workflows may now be configured to send reminder emails after a specified number of days. For example, if the activity is configured to send reminder emails every 2 days, the assigned user or role will receive an email when the activity's work item is first created (existing behavior) and will then receive email reminders every 2 days until the work item is completed.
- Minor cosmetic changes were made to the document import screen in IQdesktop.
- An issue was addressed where the roles screen in IQadministrator would error if the IQ RightFax Archive Connector was installed but not configured with a Fax Admin role.

---

### Original Released Build: 14.3.0.18

- The Workflow History grid can now be printed.
- Envelopes from templates/powerforms in DocuSign which are configured correctly will be imported to ImageQuest when completed.
- The RightFax Connector now has an option to auto-secure faxes using document groups associated with the RightFax user.
- ADSync is now included in IQadministrator as a core component of IQ.
- The base URL for WebIQ, as it appears in notification emails, can now be edited in IQadministrator.
- The From email address on system-generated emails can now be customized in IQadministrator.
- On upgrade, the Indexer preview pane is shown by default to showcase this functionality.
- Changed search screen text from "keyword search criteria" to "Full-Text Search" for better represent search functionality.
- Addressed an issue where "show all attributes" for a new document type was not working if attributes were created before the first document type.
- Addressed an issue where some pop-up windows in IQdesktop could become minimized and difficult to find.
