Introduction to WebIQ

WebIQ provides a web front-end for PC, Mac and mobile users to allow for searching and viewing ImageQuest documents without the need to install a local copy of the ImageQuest client on each device. WebIQ also allows users to edit attribute values and participate in workflow approvals.

Informa Software has a strong commitment to customer service and product quality. If you have questions, please contact an Informa Client Services Representative immediately. Thanks for using ImageQuest and please share your ideas on how we can make ImageQuest better for everyone.

Please contact us below for technical support and/or troubleshooting:

ImageQuest Support (877) 475-7778

support@informasoftware.com

Getting Started

To access the WebIQ client, open a web browser and type in the URL to the WebIQ application server *(typically http://IQservername/WebIQ)*. Ask the system administrator if you do not know the WebIQ URL. If your ImageQuest user account is setup to use Active Directory Single Sign-on, you will be taken directly to the search screen or the cabinet selection screen if you have multiple cabinets. If you are not using Active Directory Single Sign-on, you will be taken to the ImageQuest Login Page.

Figure 2 - WebIQ Search Screen

Users can specify a specific document type search on by choosing the document type from the dropdown list. By selecting a single Document Type, the list of all available attributes is changed to reflect only those attributes associated with that Document Type. After entering the search criteria and clicking the green search button at the bottom of the window, the search results will appear in a grid. ImageQuest system attributes are hidden be default.

Click the slider button at the top of the window to see the system attributes if needed (PageCount, FileType & CreateDateTime). If the screen is too narrow, an additional column will show up with the ellipsis symbol on the far right. Clicking on the 3 dots will expand the row and show the remaining attributes that were previously cut off. Click the X symbol to collapse the row.

Figure 4 - Search Results showing system attributes and 2 expanded rows

If the search grid contains more than 20 results, a page indicator will appear at the bottom of the grid allowing the user to select additional pages to see more results. If the user is using a touch screen device, the grid can be swiped left and right to navigate between the different pages.

View, Edit and Note Columns

The first column of the search results contains the View Icon. Click this icon to view the document image for that particular record. Depending on the web browser that is being used or the file type that is being selected, the image will either open in a new tab/window, or the file may be downloaded. Tiff files will be converted to PDF files on the fly for viewing purposes only.

View	Edit	Notes
-	1	

Figure 6 - View, Edit and Notes columns and icons

If the logged in user has the update document permission, the Edit icon will be visible indicating that the attribute values for that record may be modified if necessary. Clicking the pencil icon will bring up the Update Attributes screen.

Figure 7 - Update Attributes Screen

If the user updates any of the attributes and then clicks the save button, they will be brought back to the search results and the search grid will reflect any changes that were made to that record.

Note: The edit column will not be visible if the user does not have the update document permission.

Note: Document history is also recorded when viewing or editing documents from WebIQ. However, the document history can only be viewed from the IQdesktop client.

Notes may also be added or viewed by clicking the Notes icon. A gray icon indicates that there are no notes on a document while a yellow icon indicates notes were added previously. Clicking the icon allows the user to add a note to the document as well as see any previous notes that were added. If the user does not have the update document permission, the user will not be able to add a note, but they will see any notes that were previously added.

Search Grid Customization

The search grid may be customized in a several different ways. Click on the column header once to sort the contents ascending or twice for descending. The user may hold down the shift key while clicking a column to sort additional fields. An arrow appears next to the column heading to indicate which way they are being sorted.

<u>PO</u> <u>Number</u> ↑	Invoice Number
432000	100842399
00431963	100842328
00431928	100842324
00432029	100842037
00430727	100842027

Figure 10 - The Invoice Number column is sorted descending and then the PO Number column is sorted ascending

Columns may also be rearranged by clicking and holding the column header and then dragging it to a new location. A black arrow above the grid will indicate the new position of the column when the mouse button is released.

Note: Customizations apply to the current search only.

The Menu button at the top-right of the screen can be used to perform a new search, change the cabinet if multiple cabinets exist, or log out of the system.

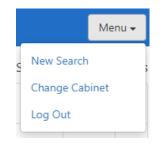

Figure 15 - WebIQ Menu Button

Completing Work Items

There are three different types of work items that can be completed using WebIQ: Workflow items, Routed items and Notification items. These screens can only be accessed via the hyperlink in the notification email that is sent when the item first enters the Work Queue. The following screen appears when clicking the Complete Work Item link for a Routed or Notification item:

WeblQ			Menu 🗸

	Invoice Number	100842037	
	Invoice Date	7/24/2018	•
Reassign		Save	Cancel

Figure 16 – Complete Work Item Screen for Notification and Routed Items

The user may update any attributes if necessary and then click the Save button to complete the work item, removing it from their work queue. They may also choose to route the item to someone else by using the dropdown list or they can choose to Reassign the item to another user or role. Routing a document keeps the item in the original work queue while reassigning it moves the item to the new work queue.

Figure 20 - Workflow Approval screen with GL Codes

Users may also edit Document Attributes, Reassign the work item or view the image via the buttons at the top. Clicking submit after selecting Approve or Reject will move the work item to the next activity in the workflow.

Note: Users must have the Update Document permission in order to complete work items.

WebIQ Connect

WebIQ Connect allows administrators to integrate existing external systems with ImageQuest by providing a special endpoint that can be queried to return a list of documents or the actual document image. This allows users of other applications to view documents without exiting the application to manually search IQdesktop or WebIQ.

The endpoint is SearchExt.aspx and can be access via the following URL:

http://iqservername/webiq/searchext.aspx?cabinet=IQCabinetName&query=(query-statement-here)

Query String Parameters

The question mark character separates the URL from all the parameters being sent to WebIQ. The valid values after the question mark in the URL are as follows:

Cabinet	Specifies the IQ cabinet that the search will be applied				
Autodisplay	When this value is set to 1, it returns the actual document image if only one result is returned. If it is absent or set to 0, the search results are returned.				
Query	The IQQL search to be performed - must be URL encoded				
&	Used to separate query parameters				
Table 1 - Query String Parameters					

Query Syntax

The syntax for the query statement uses IQQL - ImageQuest Query Language. Some examples of queries are as follows:

[DocumentType] = 'invoice' and [invoice number] = '123456'

[EmployeeID] = IN ('111-222-333', '222-333-444')

Note: Please see the ImageQuest Administrator's Guide for more information on saved queries.

The query part of the URL needs to be URL encoded. When information is passed through a URL, it should only use specific allowed characters. These allowed characters include alphabetic characters, numerals, and a few special characters that have meaning in the URL string. Any other characters that need to be added to a URL should be encoded so that they don't cause problems issuing the query.

Here are some common character encodings that are often used with WebIQ Connect:

[
]
(
)
=
' (single apostrophe character)
SPACE

Table 2 - Common URL Encodings

For example, let's say you want to query WebIQ to return any invoice number equal to 123456. Here is what the IQQL query would look like:

[DocumentType] = 'invoice' and [invoice number] = '123456'

Here is that same query URL encoded:

%5BDocumentType%5D%20%3D%20%27invoice%27%20and%20%5Binvoice%20number%5D%20%3D%20%27123456%27

Finally, here is the URL that is issued to call WebIQ to display invoice number 123456 using the autodisplay parameter:

http://iqservername/webiq/searchext.aspx?cabinet=theiqcabinetname&autodisplay=1&query=(%5BDocumentType%5D%2 0%3D%20%27invoice%27%20and%20%5Binvoice%20number%5D%20%3D%20%27123456%27)

There are many different websites that explain how to encode and decode URLs. Below are two sites that can help make encoding and decoding characters easier if you need assistance:

<u>http://meyerweb.com/eric/tools/dencoder</u> <u>http://www.w3schools.com/tags/ref_urlencode.asp</u>

User Login

If WebIQ is enabled for single sign-on, the user will be taken directly to the search results, or the document display if autodisplay is used.

If the user is required to login using an ImageQuest only account, they will first see the WebIQ login screen. Since the cabinet name is supplied in the URL, the user will not be able to select a different cabinet, unlike standard WebIQ login functionality.

All IQ permissions for the user are honored and history entries are appropriately recorded when documents are viewed.
